

# Extreme Networks

Every network architect strives to implement a network that can bring diverse applications, services and devices together seamlessly. To achieve this goal requires a highly available, secure, easy-to-manage network that is designed from the start to handle voice-quality connectivity.

Whether you opt for wired or wireless, Extreme Networks can provide the most effective and secure infrastructure for deploying applications and services with insight and control.

## Wired Infrastructure

Over the past 10 years, innovative Ethernet switching products from Extreme Networks have re-defined networking by delivering meaningful insight and unprecedented control. Ethernet has become the foundation for global communications. Now, new expectations for rich infrastructure capabilities, high security and flawless operations are testing network professionals like never before. Extreme Networks is responding with solutions that help deliver secure, robust connectivity for voice, video and data to a discerning and highly mobile user community. In today's world, your infrastructure partner matters. We can help you solve your toughest networking challenges.

## Wireless Infrastructure

Summit WM series switches deliver a high-performance wireless LAN solution that is easy to use and is secure. The switches are ready to support the most advanced wireless applications. With the capability to support high-speed, cross-subnet roaming and sophisticated multicast support, Summit WM series switches can meet nearly any mobile voice or multimedia networking challenge. With capacities of up to 200 access points (APs) per switch, Summit WM series switches can scale to support the largest WLAN installations while providing centralized management for remote branch office installations.

## Security

The Sentrant family of security products provides organisations with cost-effective easy to deploy solutions to today's tough network security challenges. These high-performance, highly scalable products verify that connecting devices are in compliance with security policy and detect and mitigate rapidly propagating network threats in seconds.

Additionally, because Extreme Networks products are based on an open network approach, customers are not locked into proprietary systems from a single vendor. The Sentrant platform integrates with and ties products together from a diverse set of vendors into a cohesive, easily managed solution.
