

Scantronic Access AX200

Plug & Play ethernet TCP/IP access control and people management

The Scantronic Access AX200 product range is a door access system that provides solutions from single standalone door entry systems to large integrated multi-site access control systems and utilises TCP/IP technology.

System Features

- Low cost
- Easy to use
- Plug & Play
- Compact size – industry standard double gang box
- Multiple language support
- Email reports and alarms
- Integrated time and attendance
- Built-in Photo ID printing
- Video verification
- Report generator
- Dynamic download (background) access even during full download
- Automatic backup
- Add replace card wizard
- Fast download 4,000 cards ca.1.6 seconds
- Import/export utility for database

AX200

The AX200 can control and monitor hundreds of remote sites from a central location over standard IP networks, generating huge operational and cost benefits, compared to traditional methods. Automatic setup and wizards reduce installation and maintenance time, and quickly help new users to perform a wide range of tasks.

The AX200 can handle two AX100 interfaces and has a modular design which can be expanded up to 256 controllers per site with 32,000 card/keyfob holders. AX200 controllers can be connected to existing local and wide area networks using low cost CAT5 cabling. This is ideal for doors requiring long cable runs, or for remote offices and sites.

Day-to-Day Operation

- Total card/keyfob management – access control, time and attendance, photo ID printing, exception
- Optional environmental monitoring
- Real-time Roll Call and 'Who's In'
- Selectable door & extended door open time (DDA compliant)
- Unique deadlock feature (exit still operates)
- 'Door held open' and 'door forced' alarms
- Signal warns staff that door is being held open, prior to 'door held open' alarm being activated
- High security mode for instant change of access levels
- Latch function (permanent unlock)

Typical Applications

- Supermarkets
- Offices
- Utility companies
- Hospitals
- Universities and any organisation with satellite buildings
- Membership clubs
